

Sample Re-Arraying with BioMicroLab Instruments

Workflow Description: This workflow is for laboratories that need to select certain samples from storage, re-array them into a new racks and update LIMS.

Most Commonly Used in: Sample Compound Storage Labs using 2D Barcoded ANSI/SLAS Standard Labware

BioMicroLab Instruments
used in the workflow

XL Series Tube
Handler

About BioMicroLab

BioMicroLab builds Sample Management Automation & Robotics for Laboratories worldwide. Our goal is to design efficient sample management robotics to accelerate your workflow and provide proven return on investment. BioMicroLab robotics platforms are designed for compatibility within the ANSI/SLAS standards to ensure integration with automation oriented labware.
